1. Functional Description

1.1 GENERAL

1.1.1 Introduction

This user guide is a part of a series of EDI message handbooks established with the purpose of making electronical business easier by using standards for the content of each message. A common name of this series of message guides is "EDI user guides for international trade with building articles".

This document is taken out of EDIFACT-message INVOIC, catalogue D.03A and is a real subset of a user guide of «**Nordic eBuilding EDI guide EDIFACT INVOIC**». Message (2008)

Objective for making this series of user guides is to promote and use them as a standard way of doing electronical business both in national but also in international.business. The documentation will be made available to every party who want to implement it in their business with trading partners.

1.1.2 Development/Maintenance

This user guide is developed based on information requirements experienced during the last 10 years in nordic countries. The documentation is produced by a project group consisting of people from BEAST (, Sweden) and TBF (Trelast og byggevarehandelens fellesorganisasjon, Norway). TUN (Trelast Unionen, Danmark) has supported with their needs of information in the different messages.

The user guides are based on the information elements in use in Sweden, Norway and Denmark to day and is intended over time to replace the national standard which are in use to day.

The new standard contains codes and qualifier which will be the same across borders. This is the huge benefit of this new standard..

Maintenance of this user guide will be outsourced to xxxxxxx. Based on experiences and requests from users, a competent management group have to decide the changes which xxxxxxx in turn will include into the user guide document.

Quality assuremnet of this document will be handled by yyyyyyy..

Changes in this document will be updated in the Change Log in chapter 1 of this document.

1.2 MESSAGE DESCRIPTION

1.2.1 Definition

The invoice is a message to be sent from the vendor to the buyer of goods or other party authorised to receive, handle or pay the invoice. The invoices from a vendor must be uniquely and continuous numbered and specify delivery place and date, invoicing date and buyer and seller. All parties involved in the VAT handling have to be identified.

At line level the invoice has to identify the articles, give quantity, price and charges/discounts and net line amount.

At total level the invoice must contain information both for payment and for keeping accounts and in addition detailed specification of the VAT in the invoice distributed on the different VAT rates..

It is very important that the invoice contains a reference to the purchase order number both in the header and at line item level with line number in the purchase order in addition. In addition the vendors order number is useful and also the delivery note number is required in the invoice in order to compare delivered quantities with the invoiced quantities.

1.2.2 Principles

The use of EDI in invoicing assumes that both sending and receiving of the invoice is done by computer programs. The following principles are recommended in the invoicing process.

1. One invoice has reference to only one delivery note which in turn has reference to only one purchase order.
2. One credit note has reference to one invoice for complete or partly credit of that invoice.

The invoice message opens for more advanced usage, but that is not recommended.

If two parties opens for more advanced usage it must be based on an agreement between the parties. It is recommended that a credit note is a pure credit note and not a combination of debit and credit line items.

Experience tells that handling of signs is a challenge in such cases.

The message code 380 tells that the document is an invoice and the total shall be a positive amount. In the same way when the message code is 381 it tells that the document is a credit note and the total amount shall be a positive amount.

1.2.3 Parties

Parties involved in a business transaction must be uniquely identified, and the preferred identifier is GLN (Global location number). End user and delivery place will usually not have a GLN and has to be identified by name and address.

Identification of involved parties must be exchanged between the trading parties before going live.

1.2.4 Article identification

Trade between buyer and supplier must be based on knowledge of article identification between the trading parties. This information must be exchanged in advance if not available from branch or national databases.

For trade across borders the use of GTIN (Global Trade Item Number) is highly recommended as article identification.

The same principle is recommended also for national trade but here may other national standards for article identification be used after agreement between the trading parties.

The method of identifying articles must be agreed on before electronic trading may start.

1.2.5 Unit of Measure (UOM)

When using GTIN, the unit of measure usually will be PCE (pieces). Some products will be measured in kilos (KGM), meters (MTR) or litres (LTR). This is the recommended standard for UOM and they are typical logistical UOMs.

Branch or national databases with articles often have defined UOMs which are a description of the type of article. Usually these UOMs are not logistical UOMs (BOT=bottle).

Article catalogue with article identification and Unit of Measure (UOM) has to be exchanged between trading parties before going live.

1.2.6 Incoterms

The Incoterms code is often advice to use in order to be aware of delivery terms for this order. In general will the terms of delivery be a part of the agreement between the trading parties.

More information at <http://www.incoterms.com>

1.2.7 Prices, discounts and charges

Control of quantities, prices and conditions is an important part after receipt of an invoice. Different data systems have different procedures for this control and it is important to check that the data system works according to the guidelines set up in this document.

Codes for different discounts and charges must be agreed on between the trading partners.

1.2.8 References

This user guide is based on the following documents.

- [1] **ISO 9735**, version 2, 1990.11.01
- [2] **UN/EDIFACT Draft directory**, D.03A

1.3 Description of columns

The different columns Standard and Implementation in the tables are displaying how the information is to be used in accordance with the EDIFACT standards and the BEAst Nordic eBuilding Implementation standard.

		Standard	Implementation	
Tag	Name	St Format	St Format	Usage / Remark

Following notes will be applied in columns Standard “St Format”:

M = Mandatory

C = Conditional

Blank space means that the project does not enter into the actual subset.

Following notes will be applied in columns Implementation “St Format”:

Used by the party:

R = Required: the data unit must be included in the message.

A = Advised: Inclusion of the data unit is recommended, but not required.

D = Dependent: the use of the data unit is dependent on that of other unit, or on other conditions.

O = Optional: the data unit can be present in the message, but is not required.

N = Not used: the data unit is not used in the application

6341	Exchange rate currency market identifier	C an..3	N	Not used

Remark:

One segment group is always required depending on business case.

SG7 First occurrence:

In some countries it is a requirement that , for invoicing in foreign currency, the invoice taxable and tax (e.g VAT) amounts must also be expressed in home currency.

Relating this to the CUX segment, authorities would require the invoicing currency and home currency to be shown together with the rate of exchange(element 5402) used.

Some companies require the currency of the invoice to be present, If, then, only one currency applies to the invoice it may be expressed as CUX+2:SEK:4+3:SEK:4:1' .

Calculation rule: Reference Currency multiplied by rate = Target Currency

If more currencies have to be transmitted, another SG7 - CUX, DTM has to be created and rules for that are described in next CUX segment.

Example:

CUX+2:EUR:4+3:EUR:11+1'

				E Exempt from tax Tax Exemption Reason Code AAP VAT exempt/reverse charge, within the construction business, Article 199 1 a-b of Council Directive 2006/112/EC
3446	Party tax identifier	C an..20	N	Not used
1227	Calculation sequence code	C an..3	N	Not used

Remark:

When sending a message with data element 5278 in the TAX segment, the tax rate (numeric) should be presented in an alpha-numeric field as follows: 19.5% ==> :19.5

In European business environment, it is recommended to use SG52 as well to summarize line items belonging to the same exemption category. Assuming an invoice with a mixture of line items (1000 EUR) subject to VAT and line items (1000 EUR) subject to tax exemption, the following example would explain the recommendation:

Example:

TAX+7+VAT+++:::25+S'
